

BHARATH VISHNU C J

Software Engineer | .NET & Angular Full Stack Developer | SQL Server

Salem, Tamil Nadu, India | +91 94435 89239 | bharathvishnu2522003@gmail.com | Portfolio: <https://c-j-bharath-portfolio.netlify.app>

PROFESSIONAL SUMMARY

Software Engineer with 2+ year of experience at Vee Healthtek building full-stack applications with Angular, .NET (Web API, Windows applications, console applications), and strong hands-on expertise in SQL Server (schema design, query optimization, stored procedures). Skilled in designing microservices and Angular micro-frontend architecture, implementing secure communication using ECDH key exchange and end-to-end payload encryption, and driving cloud migration and integration across Azure and AWS (API Gateway, Redis Cache, Blob Storage, Service Bus, Azure Functions, Data Factory). Experienced in building real-time systems with SignalR, publishing private npm and NuGet packages, and leading and mentoring a development team. Recognized with a performance award within the first 3 months of joining. Known for taking initiative to learn new technologies quickly and deliver secure, scalable, production-ready solutions.

CORE TECHNICAL SKILLS

- **Languages & Frameworks:** .NET Core, ASP.NET Web API, Angular, TypeScript, JavaScript, C#, HTML5, CSS3
- **Architecture:** Microservices Architecture, RESTful API Design, Angular Micro Frontend (Module Federation, Shell Integration, Dynamic Routing), System & Solution Architecture Design
- **Security & Encryption:** ECDH Key Exchange, End-to-End Payload Encryption, SonarQube Vulnerability Remediation
- **Application Types:** Windows Applications, Console Applications, Single Page Applications (Angular)
- **Database:** SQL Server (T-SQL, Stored Procedures, Views, Indexing, Query Optimization, Schema & Database Design) — Core Strength
- **Cloud & DevOps (Azure):** API Gateway, Redis Cache, Blob Storage, Service Bus (Messaging Queues), Azure Functions, Azure Data Factory, Container Jobs
- **Cloud (AWS):** API Gateway, S3, and related AWS services (prior architecture)
- **Real-Time & Networking:** SignalR, WebSockets, Networking Concepts
- **Package Management:** Private npm Package Publishing, Private NuGet Package Publishing
- **Tools & Practices:** Git, CI/CD Pipelines, Windows IIS Server Hosting & Deployment, Visual Studio, VS Code, Postman, Agile/Scrum, Code Reviews, Team Leadership & Mentoring

PROFESSIONAL EXPERIENCE

Software Engineer

Vee Healthtek | August 2025 – Present

- Received a formal appreciation and performance award within the first 3 months of joining, recognizing strong technical contribution and rapid ramp-up.
- Implemented ECDH (Elliptic Curve Diffie-Hellman) key exchange across the Angular front-end and .NET Web API — the same public-key agreement method used in WhatsApp's Signal Protocol (via Curve25519) for end-to-end encryption — encrypting the full application payload end-to-end and automatically regenerating session keys whenever a new session is created or refreshed, resolved complex session and token edge cases including shared-key mismatches and refresh-token failures, and optimized the encryption/decryption pipeline to eliminate perceptible performance overhead.
- Designed and implemented end-to-end payload encryption between Angular and .NET using a reusable encryption helper module, later published as a shared library across multiple repositories.
- Identified and remediated code-level security vulnerabilities through SonarQube audits across the Angular application, improving overall code quality and security posture.
- Drove migration of the core application stack from AWS to Azure, including API Gateway, Redis Cache, Blob Storage, and Azure Functions/Data Factory pipelines.

- Converted legacy SSIS Script Tasks (EDI file processing and file import) into scalable, maintainable API-based services.
- Implemented Angular Micro Frontend architecture using module federation, unifying multiple remote applications into a single shell interface.
- Built a centralized dynamic routing service and a reusable maintenance-page framework for micro-frontend modules.
- Designed and delivered a real-time notification system end-to-end using Azure Service Bus and SignalR, with Angular UI components, backend APIs, stored procedures, and rule-engine driven triggers.
- Designed and developed microservices architecture spanning Angular front-end applications and .NET Core Web APIs, improving modularity, scalability, and independent deployability of services.
- Authored and published private npm and NuGet packages, enabling reusable, version-controlled components across multiple projects and reducing duplicate development effort.
- Built a custom Query Viewer application (SSMS-like) enabling secure, controlled database access through a jump server.
- Designed the database schema and workflow for a quality-audit system, including DPU/DPO based quality metrics, error classification, and weightage calculations.
- Delivered UI/UX improvements (SlickGrid enhancements, dynamic forms, wireframes) and resolved cross-cutting production issues including session tracking, VM login, and report loading performance.
- Owned end-to-end production migration and support for multiple application releases, coordinating Angular, API, and SQL deployments; managed source control via Git, contributed to CI/CD pipelines, and deployed applications on Windows IIS Server.
- Contributed to architecture and design decisions during solution design discussions; led and mentored team members on coding standards and problem-solving, and shared GitHub Copilot adoption insights in team AI-productivity sessions.
- Proactively upskilled across security, cloud, architecture, and full-stack technologies within the first year to take on greater technical ownership.

Software Developer

OneYes Infotech Solutions | October 2023 – March 2025

- Developed and tested full-stack web application features, gaining hands-on exposure to real-world software development lifecycle and Agile practices.
- Collaborated with senior developers on debugging, deployment, and quality assurance of application modules.
- Designed, developed, and maintained software applications, contributing to application enhancements and new feature implementation.
- Worked on an Learning Management System (LMS) project, contributing to application development, feature implementation, database management, and troubleshooting.
- Contributed to the development of a Job Portal project, implementing application features, API integration, database operations, and resolving technical issues.
- Performed automation testing using Selenium and developed test cases to validate application functionality, identify defects, and ensure software quality.
- Performed coding, debugging, and troubleshooting to identify and resolve technical issues and improve application reliability.
- Participated in code reviews and collaborated with cross-functional teams to ensure maintainable and high-quality software solutions.
- Maintained technical documentation and contributed to ensuring the quality, performance, and stability of software applications.

KEY PROJECTS

- **Learning Management System** — Full-stack web application enabling course creation, content delivery, and progress tracking.
- **Ocean Guard** — Deep-sea fishermen monitoring and maritime safety Android application; published as a research paper (JETIR).

EDUCATION

B.E., Computer Science and Engineering — CGPA: 8.22

Knowledge Institute of Technology, Salem | 2020 – 2024

12th (HSC) — 74.5%

Holy Cross Matriculation Higher Secondary School, Salem | 2020

10th (SSLC) — 86.6%

Holy Cross Matriculation Higher Secondary School, Salem | 2018

INTERNSHIPS

- **CISCO AICTE Virtual Internship Program 2022** — Computer Networks, organized by CISCO Networking Academy with AICTE
- **Google Supported Virtual Internship Program** — Android Basics in Kotlin, organized by SmartInternz in collaboration with AICTE

COURSES & CERTIFICATIONS

- AWS Security, Identity and Compliance — Udemy
- IT Academy: Cloud and Virtualization Concepts — VMware
- The Fundamentals of Network Security — Udemy
- Introduction to Cloud — TNSDC, Powered by IBM
- Junior Web Developer — TN Skills & Naan Mudhalvan

ACHIEVEMENTS

- Best Performer Award — Recognized as Best Performer within the first 3 months of joining at Vee Healthtek
- Regional Level Second Prize — Metaverse Challenge 2022 (TN Naan Mudhalvan AR/VR Development, InGage Technologies)
- First Prize — National Level Coding Contest 2021, Kongunadu College of Engineering and Technology
